

MAMBU

4.5.10

Release Notes

Overview

About the Release Notes

The Release Notes are a comprehensive user guide for the latest release of Mambu. The Mambu Release Notes give you everything you need to get up and running with the new features and enhancements in the latest release.

What's Included in the Release Notes

For every new major enhancement, the Release Notes provide:

- A high-level description of the functionality
- Implementation tips to help you get started with setup and administration
- Tips to help you maximize the benefits

Beyond the major new features, there may be additional enhancements or functional changes which will be included along with a brief description.

Your Feedback Matters

We know how important the Release Notes, online help, and documentation are to your company's success with Mambu. To continually improve the service we deliver to you, we want to know what works and what doesn't. Let us know by contacting support@mambu.com or your account manager.

Contents

1. Bug Fixes

1.1 KMBU-103 - Principal Due remainder of 0.01 on the schedule when fully paying an installment for a loan account with Optimized payments and Increase overdue installments

1.2 KMBU-90 - NPE when validating unique custom field value

1.3 KMBU-96 - No "Loading" action added to ChangeAssignedOwners GWT call, enabling users to click it many times, causing frequent connection pool timeouts

1. Bug Fixes

1.1 KMBU-103 - Principal Due remainder of 0.01 on the schedule when fully paying an installment for a loan account with Optimized payments and Increase overdue installments

For loan accounts using Optimized payments and "Increase the Overdue Installments" option for Overdue Payments, a 0.01 was added to the Principal on repayment of the first installment, resulting in still having a late installment.

Mambu has corrected this behaviour in 4.5.10 and the installment will be marked Paid.

1.2 KMBU-90 - NPE when validating unique custom field value

When using a custom field set with a custom field that is required at account creation and requires also a Unique Value, and when an account is created which uses a unique value and then another attempt is made on a different account to add the same unique value, upon user attempting several times to re-use that same value, instead of throwing a validation, Mambu would return an exception error.

This behaviour has been corrected in this release and a validation message is returned.

1.3 KMBU-96 - No "Loading" action added to ChangeAssignedOwners GWT call, enabling users to click it many times, causing frequent connection pool timeouts

When attempting to reassign many clients and the reassign process was started, no progress would be indicated and the "Reassign" button remained available for clicking. Some users would continue clicking the "Reassign" button which lead to several processes to be started, which in return exposed the risk of connection timeouts.

In order to allow the user to identify that the action is indeed started and there's no need for clicking the button again, a process bar would clearly indicate that the request is in process and that more time is needed for the request to be completed.

Production release date: Thursday, 27th July, 2017
